

Enterprise Task & Invoice Management System

1. System Overview

- Role-Based Task & Invoice Management Platform
- Manages Users, Workspaces, Tasks, Invoices, Audit Logs, Notifications
- Implements strict Role-Based Access Control (RBAC)
- Maintains full audit tracking for accountability

2. User Roles

- Admin
- Operator
- Normal User

3. Admin Capabilities

- Full user management (create, update, deactivate, delete, assign roles)
- Workspace management
- Full task management across system
- Full invoice visibility and control
- Audit log monitoring and export

4. Operator Capabilities

- Create and manage workspaces
- Create, assign, update, delete tasks
- Approve or reject invoices
- View all invoices

5. Normal User Capabilities

- Login and profile management
- View assigned workspaces and tasks
- Change status of assigned tasks
- Create and manage own invoices

6. Advanced Professional Features

- Notification system (in-app and future email support)
- Invoice workflow (Draft → Pending → Approved → Rejected → Paid)
- Dashboard & reporting per role
- Full audit trail system
- Security (JWT, password hashing, rate limiting)
- Soft delete policy
- Pagination, filtering, export reports
- API versioning and input validation

7. Non-Functional Requirements

- Responsive UI
 - Scalable architecture
 - Secure authentication
 - Performance optimization
 - Maintainable modular backend design
